

ASSEMBLY & CONTROLS TECHNOLOGY

Assembly & Controls Technology is a flexible solutions provider for electrical and mechanical assembly.

“High quality service at a moments notice.”

A system control panel utilising a customer's controller,

All components procured, and built to customers drawing and specification followed by a functional test carried out by our qualified test personnel

Complex PLC based control panel assembly, double bay cabinet offers segregation for customer connections, bespoke item fully procured, built to customers drawing and made available for test.

Assembly and Controls Technology is a flexible solutions provider for electrical and mechanical assembly of a wide range of products.

While we specialise in Control Panel and Terminal box assembly our services also include the assembly of a variety of electrical and mechanical products, catering for all activities from prototype to production in either a labour only or full procurement capacity dependent on your needs. Couple this with our testing capabilities, our services provide you with a one stop solution for your requirements.

Our onsite engraving facilities enable us to manufacture labels from single bespoke to volume production at competitive prices. We currently cater for the engraving of stainless steel and "Traffolyte" style in a variety of finishes. Additionally we are able to provide cable and terminal markers printed to your specification using the latest Weidmuller "Print Jet Pro" system.

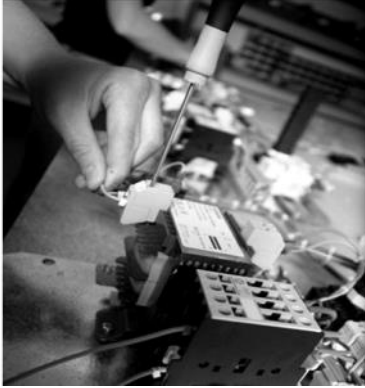

Typical ATEX assembly

Panel being connected to a simulator for functional testing

A solutions provider that fits your business

Sub Assembly wiring and continuity testing

As either a direct or indirect external services provider, ACT can increase your capabilities and profitability with our range of services .

ACT can guarantee consistently high quality to specific standards at all times.

We have full traceability of all products with Test and Inspection documents if you require them.

Just some of our customers

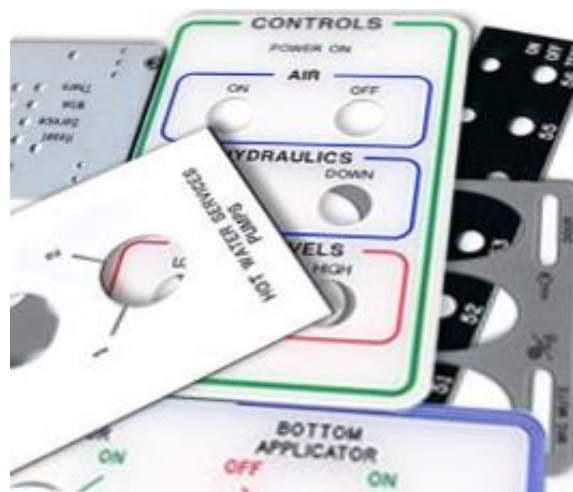

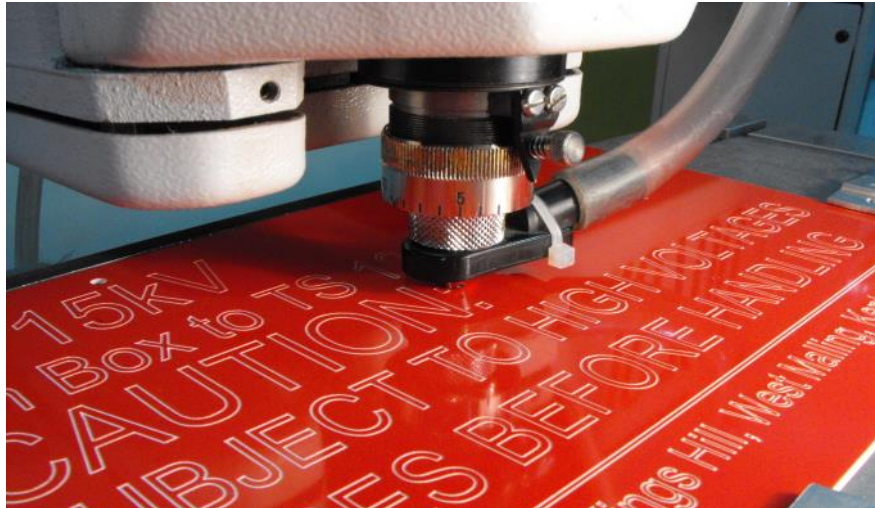

The Interface Solution Experts

ACT can provide custom labels manufactured to your design using its state of the art engraving machine, which can engrave "Trafollyte" material in a variety of colours and designs, reverse engrave and back fill with ink, including the capability to drill clearance or countersunk holes, with chamfered or straight edges.

Maximum engraving size 300 x 500mm

Certification or stainless steel label engraving is also available.
